SEMINAR SERIES

Stata Users Meetup

This meetup will be pitched more at regular Stata users in SPH or UQCCR than at novices, however novices will no doubt take away some things.

AGENDA

1. Introductions – everyone

2. Questions related to availability of Stata 15.1 (see attachment)

3. Mark to talk about reproducible research (Stata's 15's –putdocx- command is wonderful!) and his -table1_mc- and -table1_mcdta2docx*- commands [*Stata 15.1 (not 15.0) required: . search table1_mc, all]
   Automation of a 41 x 8 Results Table (using -postfile-)

4. Mark's -labeldatasyntax- command to automatically produce syntax to label variables and values, given a data dictionary in a certain format

5. Mark's -precombine- command to compare datasets esp. before merging/appending

6. Getting help. Including resources, courses (see attachment).

7. Anyone else want to share/say/ask anything? Feel free to email in advance if you would like.
